Dequence 4, Application US/0929225

Patent No. 6455886

GENERAL INFORMATION:
APPLICANT: McCall, Catherine A.
APPLICANT: Macall, Catherine A.
APPLICANT: Meber, Eric R.
TITLE OF INVENTION: NOUSES THEREOF
FILE REFERENCE: AL-2-C3
FURREY PELLICATION NUMBER: US/09/292,225
CURRENT FILING DATE: 1999-04-15
FARLIER APPLICATION NUMBER: 60/098,909

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     US-09-29-225-15

US-09-29-225-15

Sequence 15, Application US/0929225

Patent No. 6455686

GENERAL INFORMATION:

APPLICANT: Macall, Catherine A.

APPLICANT: Macall, Catherine A.

APPLICANT: Macall, Catherine A.

APPLICANT: Maber, Exic R.

TITLE OF INVENTION: NOVEL DERMATOPHACOIDES NUCLEIC ACID MOLECULES, PROTEINS

TITLE OF INVENTION: NOVEL DERMATOPHACOIDES NUCLEIC ACID MOLECULES, PROTEINS

TITLE OF INVENTION: NOVEL DERMATOPHACOIDES NUCLEIC ACID MOLECULES, PROTEINS

TITLE OF INVENTION: NOVEL DERMATOPHACOIDES NUCLEIC ACID MOLECULES, PROTEINS

Sequence 2, Application US/09134618

GENERAL INFORMATION:
APPLICANT' ADIGNT', Emad S.
TITLE OF INVENTION: NOVEL TRAIL RECEPTORS, NUCLEIC ACIDS ENCODING SAME, AND TITLE OF INVENTION: METHODS OF USE THEREOF FILE REPRENCE: 480140.432

FULLE REPRENCE: 480140.432

CURRENT APPLICATION NUMBER: US/09/134,618

CURRENT FILING DATE: 1998-08-14

NUMBER OF SEQ ID NOS: 6

SOFTWARE: PATENTIN Ver. 2.0

SEQ ID NO 2

LENTH: 411
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WESULT IN PAGE 13

A38368
chitinese (EC 3.2.1.14) precursor - Bacillus circulans
C.Species: Bacillus circulans
C.Species: Bacillus circulans
C.Date: 28-Jun-1991 #sequence_revision 28-Jun-1991 #text_change 15-Oct-1999
C.Accession: A38368
R.Hatle: Gene cloning of chitinase Al from Bacillus circulans H.
J. Biol. Chem. 265, 15659-15665, 1990
A.Title: Gene cloning of chitinase Al from Bacillus circulans WL-12 revealed its evoluti
A.Reference_number: A38368; MJID:90368776; PMID:2203782
A.Reference_number: A38368; MJID:90368776; PMID:2203782
A.Relaus: preliminary
A.Molecule type: DNA
A.Residues: 1-699 < MAD-
A.Cross-references: GB:M57601; GB:J05599; NID:g1066341; PIDN:AAA81528.1; PID:g142688
C.Superfamily: fibronectin type III repeat homology
C.Reywords: glycosidase; bydrolase; polysaccharide degradation

Note=Duplication of 24 bp in exon 10 leads to the use of a cryptic splice site. The normal splice site is still present but
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    macrophages.

DOLYMORPHISM: A 24 bp duplication in exon 10 leads to the activation of an alternative splice site and the production of an alternative splice site and the production of an inactive protein. About 6% of the population are deficient for CHIT1 activity, while 35% are carriers and show reduced enzyme levels. People with CHIT1 deficiency appear perfectly healthy.

MISCELLANGOUS: Patients with type 1 Gaucher disease (GD I)

[MIM:230800] have very high plasma levels of CHIT1, and this can be used as diagnostic aid and to evaluate the success of treatment. Successful therapy brings the CHIT1 activity levels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SIMILARITY: Belongs to chitinase class II (family 18 of glycosyl hydrolases).
SIMILARITY: Contains 1 chitin-binding type-2 domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                              TISSUE SPECIFICITY: Detected in spleen. Secreted by cultured

"Molecular cloning and characterization of an estrogen-dependent
porcine oviductal secretory glycoprotein.";

Biol. Reprod. 55:1305-1314 (1996).

-I- FUNCTION: Binds to oocyte zona pellucida in vivo. May play a role
in the fertilization process and/or early embryonic development.

-I- SUBCELLULAR LOCATION: Secretory granules.

-I- SINILARITY: Belongs to family 18 of glycosyl hydrolases.

Reprod. 50:927-934(1994).
-!- FUNCTION: Binds to oocyte zona pellucida in vivo. May play a rollin the fertilization process and/or early embryonic development.
-!- SUBCELDULAR LOCATION: Secretory granules.
-!- TISSUB SPECIFICITY: Oviduct.
-!- SIMILARITY: Belongs to family 18 of glycosyl hydrolases.
                                                                                                                                                                                        Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi,
